PERFORMANCE METALS COMPLETES MOVE TO CALDWELL CASTING

Performance Metals Products, manufacturer of Navalloy® aluminum anodes, has completed its multi-year transition of all business functions to its new owner, Caldwell Casting. All sales, marketing, accounting and manufacturing is now based in Caldwell's Cambridge, Maryland facility. Martin Wigg, Performance Metals Products president, made the announcement.

The move was phased in gradually to avoid any disruption to the supply chain. The final element is a new sales point of contact. Barbara Andrew assumed that role and may be reached at 410-228-2400 or barbara@caldwellcasting.com.

"This change represents a new focus on the Performance Metals brand, with plans for an expanded product range and dedicated resources supporting its future growth," said Wigg. Caldwell Casting has manufactured quality die castings for over 70 years. Navalloy anodes will continue to be made to military specification MIL-DTL-24779B(SH).
