

**Boat Handling Made Easy  
With The Glendinning ProPilot Joystick  
See At Progressive® Miami International Boat Show  
Tent E, Booth 317, February 15-19**

CONWAY, SOUTH CAROLINA (USA) – The Glendinning ProPilot control allows a boat owner to control the engine propulsion and the bow or stern thruster with a simple joystick interface.

Move the ProPilot joystick in any direction - or rotate it – and the boat will respond in exactly the same way. The ProPilot offers simple and intuitive boat handling – docking made simple!

The Glendinning team will be on deck in booth 317 in Tent E at the 2018 Progressive® Miami International Boat Show (Miami Marine Stadium Park & Basin) next week to show visitors how it's done.

Here's what Capt. Bill Chambers, owner of a Fleming similar to the yacht pictured above, had to say after he had ProPilot installed. "We've owned our boat for five years now and Tricia has never docked it, but today she did it twice - and in a crosswind!"

ProPilot can be added to most existing Glendinning control systems with inboard propulsion and bow thruster, or bow and stern thrusters and is also compatible with any mechanically or electronically controlled engine or transmission – with or without trolling valves. Designed to work with all thruster brands and types, including electric, hydraulic, single speed or proportional.

A dynamic positioning / automatic station keeping feature is also available (suitable propulsion and thruster systems required).

For more information about Glendinning ProPilot and other Glendinning products, visit booth 317 in Tent E at Miami 2018 or the [Glendinning Products web site](#).
