FURRION BRINGS LUXURY TO THE HIGH SEAS WITH THE INTRODUCTION OF ADONIS AND ANGEL THE VIRTUAL CONCIERGE

LAS VEGAS – Furrion, a global leader of innovative products and solutions for the consumer, specialty vehicle and marine markets, today unveils the crown jewel of its concept fleet: Adonis, a 78-foot customized Numarine yacht. Furrion partnered with Numarine yachts to build an entirely new experience on water. Furrion's hardware and software solutions, combined with prestige boat building, gave birth to a masterful blend of artistry, design and advanced technology. This is the first time ever that a yacht has appeared at CES, and it marks an expansion into more marine concepts at the show. Adonis is a luxury smart yacht – a concept that combines luxury with futuristic innovation and artificial intelligence. This yacht houses the best of Furrion's technology, from audiovisual electronics, kitchen appliances, camera observation and monitoring. **Most importantly, Adonis introduces Furrion's new virtual concierge with artificial intelligence, Angel.**

"It is incredible to see our vision of Adonis be a reality here at CES," said Matt Fidler, co-founder and chief marketing officer for Furrion. "Furrion's history is rooted in marine and now we are able to combine the best of our technology and futuristic innovation to deliver an experience unlike no other. The addition of Angel gives consumers an always-present assistant, regardless of their Internet connection."

Virtual Concierge

Angel is powered by a network that knows no limits and built with intelligence that responds to your every move. She is always ready to assist in ways we once only dreamed possible. Feeling hungry? Angel can send your requests to the kitchen, including reminding them of dietary restrictions that go along with your profile and can order groceries or supplies that might be needed as well.

Angel can deliver the news and weather, control your morning playlist, guide you through a yoga workout and so much more. Powered by artificial intelligence, it uses facial recognition to learn your personal preferences to customize your experience. Facial recognition authentication is an added security benefit, as she is able to know who is who and adjust the environment to their preferences. Learning your preferences helps Angel suggest things you may like, whether a new activity at your destination, a new restaurant or perhaps a new outfit as she learns your sizes and recommends outfits from your favorite retailer. Naturally, sometimes you just want to be in the middle of no where and a strong connection may not be available, but that is no problem for Angel; she can operate on the Angel closed network or online.

Built to help you push the boundaries of life and explore

Angel is a powerful tool and an intelligent guide to wherever you venture. Angel is a digital service built with technology that enhances comfort, builds connectivity and enriches your lifestyle. As you explore new places, Angel is your guide. As your virtual travel concierge, Angel will help research locations and plan out your travel itinerary. She can suggest local restaurants, must-do activities and lodging. Angel can handle the bookings as well, from

FURRION

making reservations for you at restaurants to booking your campground or marina stay. She can even book tickets for local attractions, taking the hassle out of trip planning. Angel delivers valuable navigation help that goes beyond turn-by-turn directions, assisting with proactively giving directions to points of interest, providing the best travel routes and suggesting things you may like along the route based on your preferences.

Designed to simplify

Angel is designed to simplify the trip so you have more time to immerse yourself in your surroundings and soak up the experience. In addition to being your virtual concierge, Angel can control the majority of electronics on the boat, including lights, blinds, media and climate. She learns your habits and makes suggestions to the program. Angel learns and recognizes the sound of your voice to tailor the environment to your preferences; for example, if you happen to prefer the blinds up, you can ask Angel to do that, and over time, she will just recognize that it is you in the room and make that adjustment. Angel will deliver all notifications, calls, messages and reminders. She can even help improve your health. With built-in equipment aboard Adonis, Angel can monitor your weight and even analyze the moisture levels in your skin. As Furrion continues to develop Angel, more features along this line will be added.

Seamless Integration

Adonis features advanced technology on board and Angel seamlessly integrates to control them all. Through a built-in voice module smart speaker located throughout the yacht, you just speak "Hi Angel" and then give your commands. For example you can ask Angel to play a favorite playlist through the Furrion marine speaker system in one cabin or throughout the yacht. On board Adonis there are several Furrion Smart Mirrors with an interactive display found in the master cabin and throughout the yacht. At first glance it looks like a wall mirror, but it is so much more. Simply touch the mirror or ask Angel to display something on it to wake it up. Smart Mirror functions like a large tablet or touch screen allowing you view updates such as weather, schedules, news and social media. You can even watch television or other media on the Smart Mirror. Commands can be made via touch or asking Angel and the response will be displayed on the mirror. Smart Mirror, like Angel, works in the offline mode as well. Information is pulled and stored from the Internet so that functionality is not interrupted. When a connection is available, the system syncs and updates automatically. The Smart Mirror aboard Adonis is the first in this ongoing project. More functionality and features will be continually added in the future.

The Furrion Sense TV is an ultra-slim HDTV with a built in soundbar. Like all Furrion TVs, Sense TV features the proprietary Vibration Smart technology ensuring a crisp, stable picture whether at port or sea. Angel can control the TV and send the content you select to the TV. Angel can control and monitor all cameras aboard Adonis and alert you when attention is required. Adding additional surveillance, Adonis features a drone and a drone port on the top deck that is controlled by Angel. Angel can deploy the drone to provide security surveillance of the surroundings or to take photos of moments and places at the request of your voice. The Adonis drone will continually add new features and functions as this technology advances. The cockpit features the Furrion monitoring system that displays everything from navigation to equipment monitoring. Angel is able to constantly monitor and alert you to changes that need to be made either in navigation, perhaps due to weather, or alert you if something in engineering needs attention. Everything Angel is monitoring can be viewed and controlled through the Furrion touchpad smart remote.

FURRION

Adonis is only being unveiled now, yet it has already broken records. It holds the record for the largest marine move on land. Be sure to stop by Furrion's booth #7914 in the North Hall of the LVCC and experience the grandeur of Adonis and the intelligence of Angel for yourself.
