PRESS RELEASE

DockMaster Announces Integration with Kenect & FuelCloud

West Palm Beach, Jan. 23, 2019 — Today DockMaster officially announces full integration with Kenect and FuelCloud. DockMaster continues to lead the Marine Management Software Industry, partnering with the best third-party solutions that bring powerful and effective technology to all business models.

FuelCloud combines hardware, a web portal, and a mobile application to give users real-time insight into their fuel. With FuelCloud our customers can track and control every gallon in their on-site tanks for a fraction of the cost of traditional systems. Manage inventory, run custom reports, automatically file tax forms and protect your fuel with the click of a button.

The integration between DockMaster and **Kenect** allows businesses to quickly send text messages to customers. From letting them know that the special part they ordered is ready for pickup, to telling them that the work on their boat is done, customers will appreciate the seamless communication. Furthermore, when your sales are completed, Kenect can send a timely text message to customers, allowing them to submit reviews of their experience.

“We pride ourselves on the quality and quantity of partnerships we have in place with technology vendors throughout the Marine Industry”, said Cam Collins, DockMaster’s President. “Through our open API, we have empowered

our customers by providing them with consumer facing solutions offered by our partners that enable them to create customers for life and enhance the boating experience.”

About DockMaster Inc.
