

RELiON Battery Launches New Powerhouse Lithium Marine and RV Battery Providing Advanced Off-Grid Freedom

CHARLOTTE, NC (March 24, 2022) – RELiON Battery, a global leader in lithium batteries, today announced the launch of its InSight Series™ 12V Battery, offering boat and RV owners the ability to power more appliances for longer while off-the-grid. Designed specifically for RV and marine deep cycle applications, the InSight 12V enables users to disconnect further by powering electronics longer and connecting to shore power less often. At 120 amp-hours and capable of providing 160 amps continuous current, one battery can power multiple appliances in an RV or marine vessel at the same time.

“We are thrilled to release the third battery in our game changing InSight Series™ line of products,” said RELiON Chief Operating Officer, Eric Lindquist. “The development of the InSight Series 12V Battery fills a critical need in the marketplace and was inspired by our customers who seek the utmost reliability and performance when they are on the road or on the water. We believe we are setting a new standard for the industry by providing a higher peak discharge, which will play an integral part in the customer experience and the power capabilities consumers will begin to expect going forward.”

Competitive advantages of the InSight 12V Battery include:

- Higher continuous capabilities offering 3200 watts for up to two minutes
- Low temperature performance for seamless and safe charging at temperatures down to -4°F
- Internal heat sink preventing overheating of critical components and extending the life of the battery
- SuperSmart BMS with intuitive software capable of calculating state of charge and state of health
- GC2 size and IP67 case to fit virtually anywhere while being waterproof

RELiON released its groundbreaking InSight Series™ line in 2019 with the InSight 48V, the first scalable lithium drop-in replacement battery for use in golf cars, LSVs, PTVs and utility vehicles. The company’s InSight Series™ features all the benefits of lithium batteries, but designed with more intelligent features built in. From its superior battery design to its one-of-a-kind Battery Management System (BMS) and intuitive software, InSight Series™ batteries offer exclusive advantages not available in competitor products.

“The success of our InSight Series™ line has been phenomenal, and we are excited to fulfill our customers’ desire for new models in the lineup,” added Lindquist. “At RELiON we look at the challenges our customers face and truly listen to their feedback. This enables our team to stay at the forefront of what our customers need and provide an intuitive experience with lithium, so they can focus on the journey ahead.”

About RELiON Battery

RELiON is a global leader in lithium batteries powering a range of applications including recreational vehicles, marine, solar-powered solutions, and more. The company is on a mission to power the world’s transition to lithium energy storage, ethically. RELiON helps customers challenge and overcome their limits by offering a range of high-quality battery products that continue to pave the way forward to a greener and more efficient future for energy storage. The company is dedicated to giving back by donating one percent of annual revenue to environmental causes through its 1% for

the Planet membership. RELiON Battery is also part of Brunswick's Advanced Systems Group (ASG) which consists of leading P&A brands in advanced batteries, electrical power management, digital control & monitoring, and networked systems & devices for the marine, RV, specialty vehicle, and other industries.
